Appendix B:	10-Year Rational Hydrology Calculations – Existing Conditions 100-Year Rational Hydrology Calculations – Existing Conditions
Appendix C:	10-Year Rational Hydrology Calculations – Proposed Conditions 100-Year Rational Hydrology Calculations – Proposed Conditions
Appendix D:	Hydrology Exhibit – Existing Conditions Hydrology Exhibit – Proposed Conditions

## **Sage Stetson Hemet Drainage Report Narrative**

The Sage Stetson Hemet retail project is a proposal to develop approximately 2.3 acres located on the west side of the existing McCrometer facility into a 7-11 convenience store, automated car wash and drive thru restaurant. The property is located at the southeast corner of Sanderson Avenue and Stetson Avenue in Hemet, California. .

The site proposed for development has a natural topographic gradient to the northwest. Proposed grading on the site perpetuates the natural gradient. The aforementioned commercial uses drain to water quality BMPs located at the downstream end of each drainage area. See the project specific Preliminary WQMP for BMP details.

This report includes rational hydrology calculations for both the 10-year and 100-year recurrence intervals. Calculations were performed for the existing condition; McCrometer facility and undeveloped areas. Peak flows were calculated to existing catch basins and drainage area low points. Calculations were also performed for the proposed condition: McCrometer facility and proposed development of the commercial uses.

Hydrology calculations were based on the Rational Method as stipulated in the Riverside County Flood Control and Water Conservation District Hydrology Manual dated 1978. Calculations were performed using CIVILCADD/CIVILDESIGN Engineering software. Onsite soils were categorized as B and BC per the manual.

## RUNOFF SUMMARY

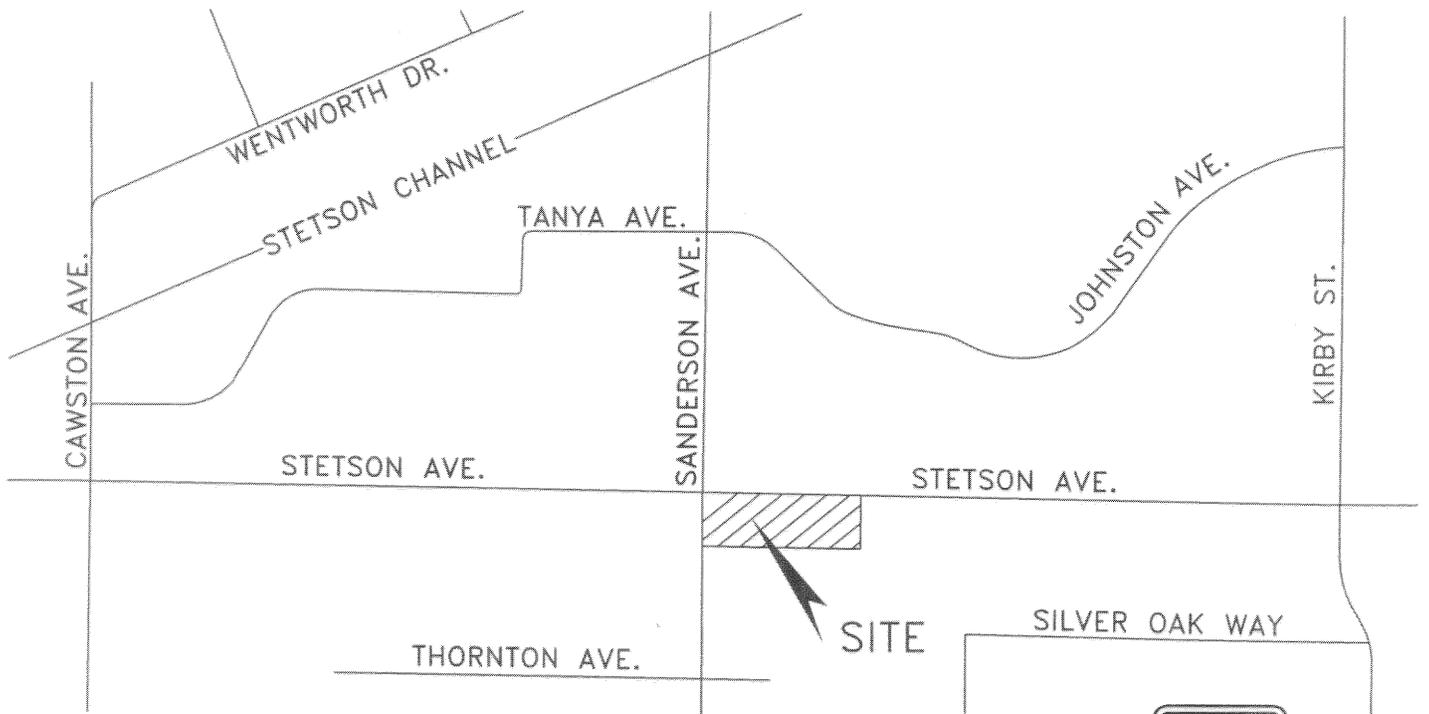

### EXISTING CONDITIONS

Drainage Area Designation	Area (Ac)	Q <sub>10</sub> (cfs)	Q <sub>100</sub> (cfs)
A	2.3	2.3	3.8
B	0.4	0.7	1.1
C	0.3	0.7	1.1
D	0.3	0.7	1.1
E	5.4	8.6	13.4

### PROPOSED CONDITIONS

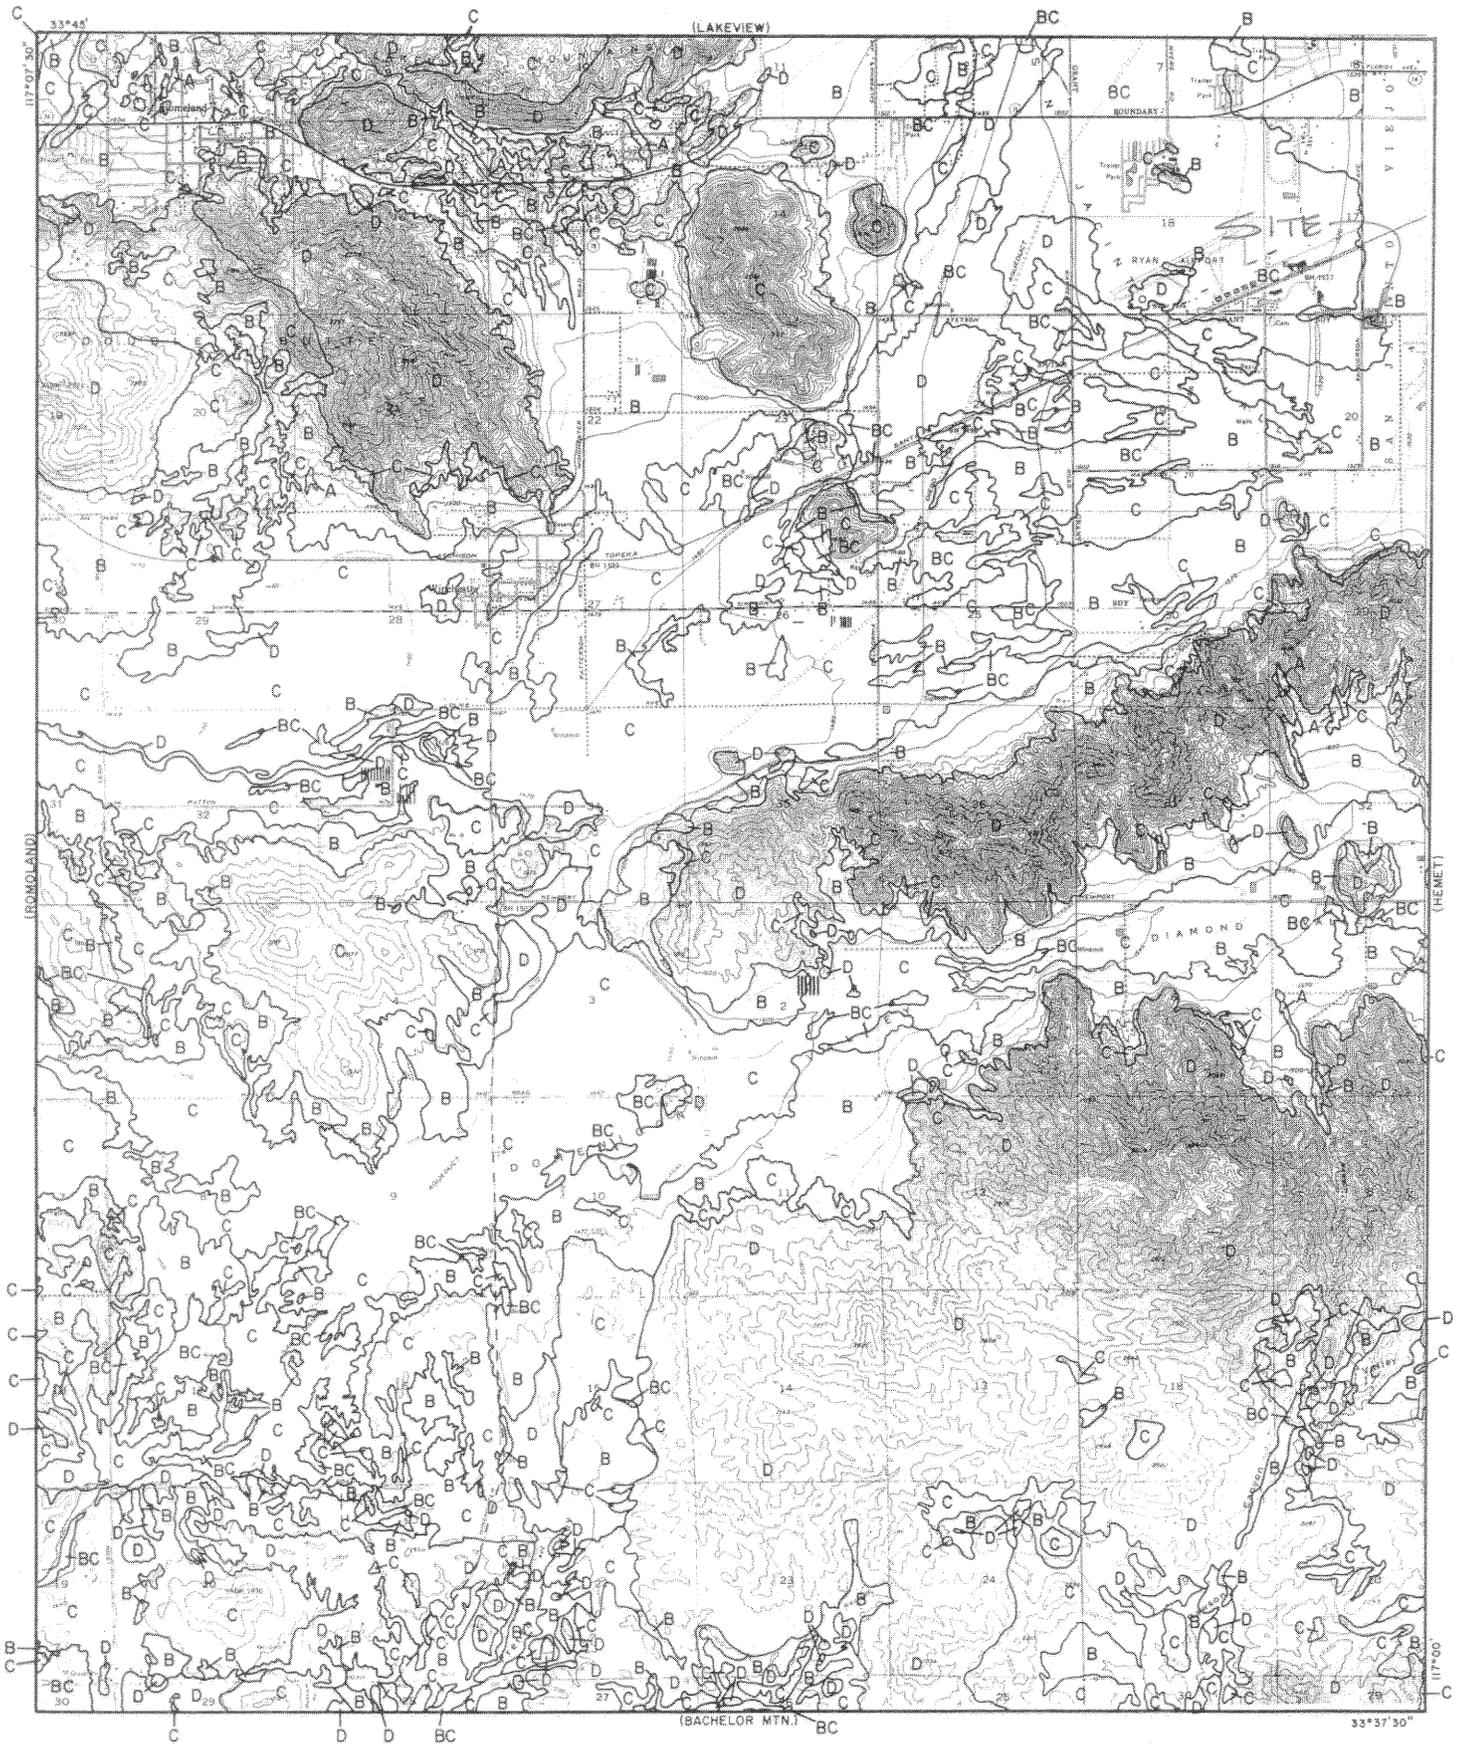

Drainage Area Designation	Area (Ac)	Q <sub>10</sub> (cfs)	Q <sub>100</sub> (cfs)
F	1.2	2.2	3.4
G	0.6	1.3	2.0
H	0.4	0.8	1.2
I	2.9	5.0	7.8

1978 hydrology manual

Storm event (year) = 10.00 Antecedent Moisture Condition = 2

Standard intensity-duration curves data (Plate D-4.1)

For the [ Hemet ] area used.

10 year storm 10 minute intensity = 1.960(In/Hr)  
10 year storm 60 minute intensity = 0.760(In/Hr)  
100 year storm 10 minute intensity = 3.050(In/Hr)  
100 year storm 60 minute intensity = 1.180(In/Hr)

Storm event year = 10.0

Calculated rainfall intensity data:

1 hour intensity = 0.760(In/Hr)

Slope of intensity duration curve = 0.5300

\*\*\*\*\*

Initial area flow distance = 300.000 (Ft.)

Top (of initial area) elevation = 28.800 (Ft.)

Bottom (of initial area) elevation = 27.000 (Ft.)

Difference in elevation = 1.800 (Ft.)

Slope = 0.00600 s(percent) = 0.60

$TC = k(0.300) * [(length^3) / (elevation\ change)]^{0.2}$

Initial area time of concentration = 8.172 min.

Rainfall intensity = 2.186 (In/Hr) for a 10.0 year storm

COMMERCIAL subarea type

Runoff Coefficient = 0.876

Decimal fraction soil group A = 0.000

Decimal fraction soil group B = 0.500

Decimal fraction soil group C = 0.500

Decimal fraction soil group D = 0.000

RI index for soil(AMC 2) = 62.50  
Pervious area fraction = 0.100; Impervious fraction = 0.900  
Initial subarea runoff = 0.766(CFS)  

---

Total initial stream area = 0.400(Ac.)  
Pervious area fraction = 0.100  
End of computations, total study area = 0.40 (Ac.)  
The following figures may  
be used for a unit hydrograph study of the same area.

Area averaged pervious area fraction( $A_p$ ) = 0.100  
Area averaged RI index number = 62.5

Storm event (year) = 100.00 Antecedent Moisture Condition = 2

Standard intensity-duration curves data (Plate D-4.1)

For the [ Hemet ] area used.

10 year storm 10 minute intensity = 1.960(In/Hr)

10 year storm 60 minute intensity = 0.760(In/Hr)

100 year storm 10 minute intensity = 3.050(In/Hr)

100 year storm 60 minute intensity = 1.180(In/Hr)

Storm event year = 100.0

Calculated rainfall intensity data:

1 hour intensity = 1.180(In/Hr)

Slope of intensity duration curve = 0.5300
